Understanding
the benefits of using
Gartner LED

You may discover what sets Gartner apart from another lighting brands by seeing that the brand gained trust from the market for more than 10 years when first launched in the automotive lighting segment. Another aspect to consider was that many leading lighting and electronic distributors in Indonesia demanded Gartner's expansion in the industrial and multi purpose lighting segment.

This is primarily due to the flexibility of Gartner's commitment to service and innovation through it's products. With the use of superior quality of materials with custom extrusion profile specifically designed to last, Gartner now provides an opportunity for public to proof its product quality and commitment.
